

Bonamici Ducati Streetfighter V4/V4S rearsets

Italian parts and accessory specialist Bonamici has added to its accessory line with new parts for the Ducati Streetfighter V4/V4S – "only the best for those who ride with the Ducati Tribe."

At the heart of the new Accessory Line is a rearset "that leads - not follows. Designed for all styles of sport riding, it integrates flawlessly with OEM components including the stock brake master cylinder and heat shield plastics.

"It's fully compatible with both the Akrapovi Ducati Performance and Termignoni exhaust systems, delivering peak performance with no trade-offs."

Key Features include racing-inspired curved heel plates for zero boot interference, nine-position adjustability for custom ergonomics, oversized dual-bearing linkages for ultra-smooth, stable shifting and shift lever supports for both standard and reverse setups, with two selectable riding feels - crisp and responsive and smooth and progressive.

The precision-built gear selector delivers

"unmatched shifting accuracy with brake-side innovations including re-installable OEM return spring, micrometric lever height and preload adjustment and integrated master cylinder bracket for enhanced stiffness and feel.

The net weight is just 1.130 kg, in a glossy black anodised finish, highlighted by Bonamici's signature red bushing.
