Bonamici for Kawasaki ZX-6R 2024

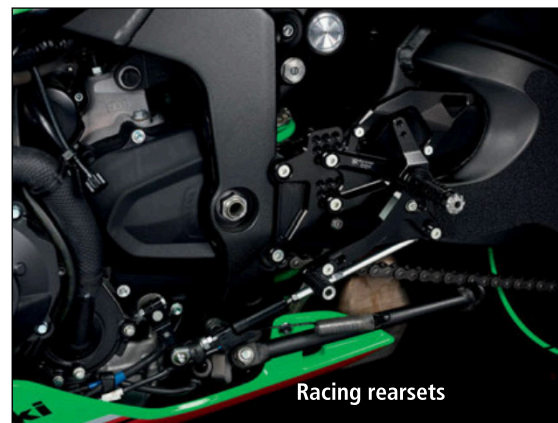

Italian race parts specialist Bonamici has turned its attention to Kawasaki's popular ZX-6R (2024) for its latest new accessory line. An internationally appreciated balance between lightness, structural strength, the enhanced riding feel of the ZX owes a lot to the precision manufacturing, high strength and lightweight materials and ergonomics of a design that is an ideal platform for Bonamici's own approach to design and performance.

In its search for even better ergonomics, precise control and responsive handling, Bonamici has focused on key component and feature areas of the ZX.

K024 PRO **Racing Rearsets** are designed for fully adjustable ergonomics, allowing riders to fine-tune their foot position for the best fit. Compatible with reverse shifting and seamlessly integrated with the stock quickshifter for faster, smoother gear changes. Bonamici **brake and clutch levers** are precision machined in aerospace-grade material and

Racing rearsets

engineered for maximum ergonomics. Their enhanced design provides an instant response, superior grip, and optimal brake modulation, enhancing safety and control - especially in corners. One of the Bonamici hallmarks is **customised aesthetics** with an exclusive colour range. Riders can personalise their ZX-6R with a selection of premium components and finishes, tailored to match any style.

"Every detail in this accessory line has been designed with a single goal: to deliver performance, precision, and uncompromising customisation, ensuring riders get the most out of their bike with Bonamici Racing."

AIROH Breaks the Silence

AIROH has announced the introduction of the AWC 4 and AWC 2 communication systems. "Designed to offer a seamless and integrated riding experience, these cutting-edge devices have been developed in collaboration with Interphone (of the Italian Cellularline Group).

"Both models feature a compact design that maintains the comfort and aesthetics of the helmet while ensuring exceptional sound clarity, ease of use, waterproofing, and a communication range of up to 500 meters.

"Delivering crystal-clear, high-quality, and long-lasting communication, the systems perfectly complement AIROH helmets without compromising their sleek lines and bold graphics."

The AWC 4 allows users to listen to audio from multiple sources - such as music and GPS directions - simultaneously, "ensuring an uninterrupted audio experience". The directional windproof microphone optimises both input and output sound quality - "allowing clear phone conversations via Bluetooth. With a separate battery for a more compact design, and up to 15 hours of battery life, AWC 4 is the perfect

companion for group motorcycle adventures, enabling seamless connection between up to four devices."

As its designation suggests, the AWC 2 is a "compact and minimalist design" dual user price-point system with an integrated battery that "preserves the helmet's aesthetics and comfort. The system

features simple and ergonomic controls that remain easy to manage even while wearing gloves.

"Like the AWC 4, the AWC 2 effectively reduces background noise and ensures outstanding audio quality - making conversations clear and enjoyable even at high speeds. It offers battery life of up to 10 hours."
