PRO GUIDE

Bonamici for GSX8S and GSX8R

GSX8S

Italian parts specialist Bonamici Racing says "unleash the performance and precision" of the Suzuki GSX8S/R with "our latest line of model-specific high-performance components". Engineered to enhance the aesthetics and functionality, Bonamici Racing components are crafted with the utmost attention to detail.

These **adjustable rearsets with standard and reverse shift** offer a versatile set-up with the option to switch between standard and reverse shifting. This adaptability ensures a customised riding experience tailored to your customers' preference and riding style. "Precision-engineered for maximum grip and control, these rearsets enhance rider comfort and performance". The rearsets can be customised with additional colours and accessories, folding footpegs, toe pegs and more.

Bonamici **raised and downward-inclined clip-on handlebars** are designed to ensure a more aggressive riding position, being tilted 6° downwards, allowing for tighter turns and a more agile ride and will accept a wide range of components, controls and accessories.

"Our **foldable brake and clutch levers** combine functionality with style. They increase the feeling for sports use. Available in a range of colours, these levers not only add a personalised touch to the bike, but also feature a foldable system that minimises damage in the event of a fall, ensuring durability and longevity. Available in three different interchangeable shapes".

Designed for improved safety, style and ergonomics, Bonamici **EVO brake and clutch lever guards** provide essential protection for your levers, preventing accidental engagement and adding a sleek, race-inspired look to your bike. Also available

in a one-of-a-kind carbon version, finished on both sides (right side only).

"Our **quick-release fuel cap** offers both convenience and security. Designed for rapid refuelling, this cap allows for easy access while providing a secure seal to prevent fuel leakage, making it a must-have for track days and city rides. This can also be customised with various colours".

Bonamici says that its **10 ml brake fluid reservoir** "represents the perfect balance between small size and excellent functionality. This design piece saves space while ensuring a practical and efficient user experience. Plus, it's available in a range of eight different colours, each featuring a black cap for an unrivalled, stylish look".

The **internal membrane** acts as a "reverse expansion vessel". When there is a demand for fluid, the reservoir goes into a vacuum state, and the membrane compresses within it. This ensures that there is no loss of pressure in the system.

Finally, Bonamici **standard and racing stand supports** (swingarm spools) are designed to provide stable and secure lifting for both standard and racing stands. Customisable with various colours, these supports facilitate easy maintenance and repairs, making them an essential addition for any serious rider or mechanic.
